Product:

Hallmark Reduced Swing Single Action Doorset

Description:

The Hallmark Reduced Swing Door (also known as a Reduced Swing Bi-fold Door) has a reduced swing arc, making it ideal for wheelchairs or where patients have limited mobility such as those using a walking frame, as well as space-saving in efficient designed builds.

The door concertinas in on itself, reducing the swing arc by a third of that of a standard door.

Features

Two panel articulated door

Door swing follows an elliptical curve, reducing door swing by one-third of conventional doors

Fits a standard door frame

Wall space is not compromised. Reduced door swing uses less floor space - perfect for constrained space

Locally designed and manufactured

Designed and manufactured in NZ specifically for NZ requirements

Health & Safety

Has minimal gap between doors in operation to reduce finger pinch risk for carers and patients

NON-TRAP OPERATING GEAR DESIGN

Unlike other reduced swing door options available in the NZ market, the Hallmark design includes a non-trap operating gear, meaning no large gaps are created by the door pivot, significantly reducing trap-risk.

Specifications

Clear opening

- 900mm (excluding door furniture projection)
- 1200mm clear opening available
- Specific custom width dimensions can also be achieved

Leaf Facing Options

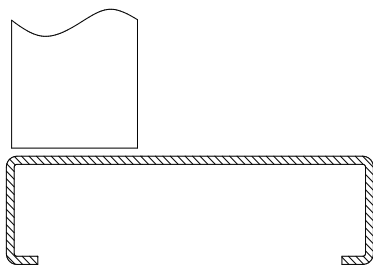

- MDF
- Hardboard
