**Sliding Doors**

**Functional Doors**

**Safety & Security Hardware**

## Manually-Operated Privacy Vision Panels

The Hipac IntaGlaze is a tried and tested vision panel that ensures the security and dignity of both staff and patients. This quiet, manually operated, panel requires no wiring or mains power. It is constructed using three panes of glass, the middle pane of glass moves up and down as required to align or misalign the stripes on the glass. This is a more robust alternative to venetians.

Colours and graphics are available for the strips to brighten rooms up and coordinate with existing colour schemes.

## Electronic Vision Panels

Hallmark doors can be fitted with vision panels using iGlass electronic blind technology, providing privacy and hygiene benefits. iGlass Privacy replaces the need for venetian blinds or curtains which require ongoing cleaning or laundering. Switching can be by touch, switch, motion or voice.

For solutions requiring electrical power, such as iGlass vision panels and Door Top Alarms, we are able to conceal an electric power transfer device in the edge of a swinging door, providing the means to transfer power from door to frame. These units are completely concealed when the door is in the closed position.

## Doortop Alarm Doors

We offer At Risk Patient Protection solutions designed to prevent and reduce the risks of ligature scenarios related to doors. Doortop Alarm doors have hardware technology built in to alert staff of a potential ligature attempt. It sends a signal to the staff attack system when a patient has attempted to wedge something between the head of the door and the frame.

The sensor runs the full width of the door leaf and detects if weight has been applied e.g. the weight from a ligature attempt, or if something is jammed between the top of the door and head of the frame.

The system has a built in time delay to ensure that the alarm won't be triggered by accidental bumps or patients playing with the sensor, only a sustained applied weight (as would be the case in a ligature attempt) will trigger the alarm and alert staff to respond. The door top alarm is compatible with most staff attack systems.

## Full Mortice Anti-Ligature Hinged Doors

Hallmark are able to offer full mortice single swing continuous geared antiligature SECURAHinge™ doors featuring anti-ligature tip designed for single acting doors.

- Gives your patients privacy
- Reduces your maintenance and overall lifecycle costs
- Can help reduce the risk of patient suicide and self-harm
- Tested to 250,000 cycles (equivalent to 10 years use)
